Welcome to St. Paul CELC

St. Paul Christian Early Learning Center is excited to offer summer enrichment camps for preschool children.

This summer join us as we experience a summer full of science, technology, engineering, art, and math (STEAM).

Each camp is designed to provide opportunities for kindergarten aged children to explore science, technology, engineering, art and math using real world experiences. Your child will have the opportunity to go on field trips, hear guest speakers, create projects, perform experiments, and of course have fun!

Kindergarten Enrichment Camps

JUNE 20TH -JUNE 24TH

Science Camp– We will be introducing the scientific method. We will follow the scientific method to complete simple science experiments. Like which paper towel is the strongest? If you were an archeologist, how would you get a fossil out of ice? How can I get a toy car to travel further? Faster?

June 27th -July 1st

Science Camp- This week we will be scientists and create our own science experiments using the available materials. We will use the scientific method to explore questions we have about the world around us. We will then create a science project showing what we learned.

July 11th-15th

Paper Magic- For this camp we will be using paper to build structures. We will draw up blueprints, study structures, build the materials and structures then test our theories.

July 18th-22nd

The Three Little Pig Science Camp- We will read different versions of the Three Little Pigs and build structures using materials from the story. We will test the structures using fans to see what structure would be the sturdiest.

July 25th-29th

Robotics Camp- This week will be filled with everything robotic. We will learn about robotics, and how the technology is used. We will also create and build robot art work and a working robot.

August 1st-August 5th

Its Electric- Students this week will build circuits. We will learn about circuits and how they work. Then we will use what we learned to build simple and complex circuits.

August 8th-12th

Bridge Builders- This week your child will be a bridge building engineer. We will study bridge designs and then each child will see if they can build the strongest bridge. We will then test the structures.

August 15th-19th

Top Secret Camp- This week we will complete some mystery bag science. The students will be given a mission to be completed. They will work in small groups to complete this mission using only the objects in the mystery bag.
